S&OP; / IBP EXECUTIVE REVIEW

Q2 FY2026 S&OP; / Integrated Business Planning Executive Review

Reconciling the demand, supply, inventory and financial plans into one consensus number

Document type Integrated Business Planning executive review
Period Q2 FY2026 cycle (actuals through May)
Owner S&OP; Lead; cross-functional (Demand, Supply, Finance)
Prepared June 2026

Consensus demand vs plan (May)	**-3.4% · improving from –5.2% in Q1**
Cumulative gap-to-budget (Jan–May)	**$-14.4M (-4.5%)**
Fill rate (supply)	**94.7% May — fully storm-recovered**
Two drivers of the gap	**Crunchwell Louisiana (down) · ProteinPeak (recovering up)**
Consensus call	**Hold FY26 on the ProteinPeak launch; fund the LA recovery**

Executive summary

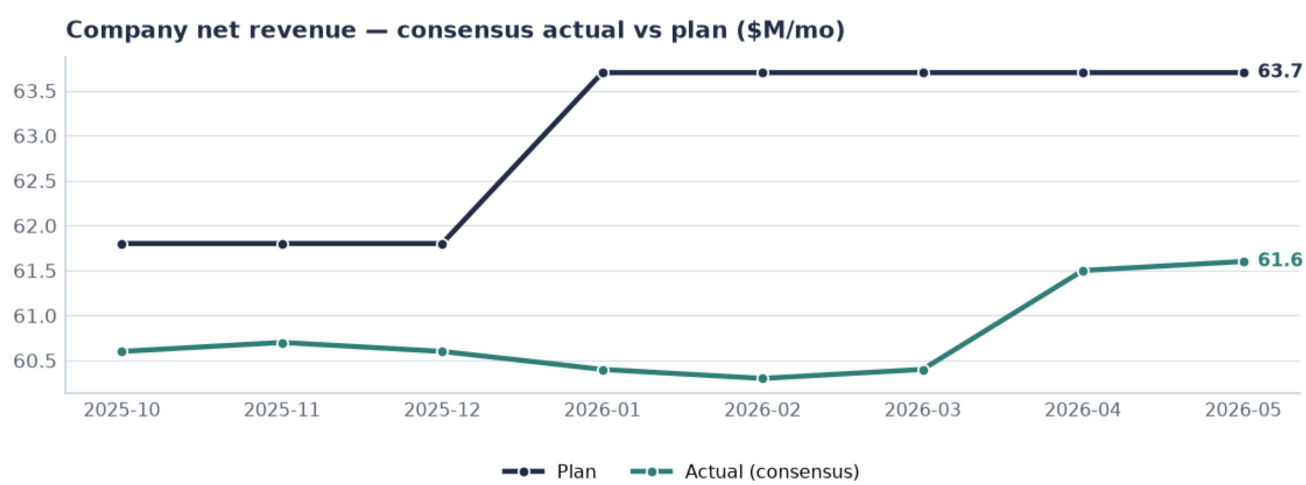
This cycle reconciles the demand, supply, inventory and financial plans into a single consensus. The company ran -3.4% behind plan in May, an improvement from –5.2% through Q1 — the trajectory is closing, not widening. Supply has fully recovered from the Hurricane Tonya disruption (fill back to ~95% after a ~52% storm trough), so the residual gap is a demand-and-mix story concentrated in two known places: Crunchwell's Louisiana erosion on the downside, and a ProteinPeak launch recovering on the upside. The consensus recommendation is to hold the FY26 number on the strength of the launch read.

- **Consensus demand** is -3.4% to plan in May, up from –5.2% in Q1. The cumulative Jan–May gap-to-budget is $-14.4M.
- **ProteinPeak** is the swing factor on the upside: Apr–May actuals recovered to –6% to plan from –25% pre-launch, as PP005/PP006 shipped from April 20.
- **Crunchwell Louisiana** is the structural downside — a –340 bps local share loss with a funded three-leg recovery (see the Supply Chain read, Report 26, for the LA / Houston-DC service dimension).
- **Supply is no longer a constraint:** fill rate is back at ~95% and launch supply for ProteinPeak held at ~94% through the April ramp.

1 · Consensus scorecard

DEMAND VS PLAN (MAY)	GAP-TO-BUDGET (JAN–MAY)	FILL RATE	PROTEINPEAK VS PLAN
-3.4%	**$-14.4M**	**94.7%**	**–6.1%**
was –5.2% in Q1	cumulative	storm-recovered	was –25% pre-launch

The scorecard reads amber and improving. Demand is behind plan but the miss is narrowing each month; supply and inventory are green; and the financial gap is fully attributable to the two managed drivers below. The purpose of this cycle is to confirm the consensus number and lock the decisions that keep the FY26 commitment intact.



Actual closes toward plan through Q2 as the ProteinPeak launch pipe fills. Plan holds at $63.7M/mo; May actual $61.6M.

2 · Demand plan — consensus vs plan

Consensus demand improved from –5.2% in Q1 to –3.4% in May. Four of six brands sit within 2 points of plan; the movement in the number is dominated by ProteinPeak (recovering) and Crunchwell (structurally soft). The demand plan below is the reconciled consensus after the demand-review and management-review steps of this cycle.

2.1 · Brand demand vs plan — Q1 vs Q2 (Apr–May)

Brand	Q1 var	Q2 var (Apr–May)	Trend	Consensus status
ProteinPeak	-25.4%	-6.1%	Improving	Watch
Crunchwell	-5.9%	-5.8%	Stable	Watch
TrailGrove	-1.7%	-1.5%	Stable	On track
HoneyNest	-1.1%	-1.1%	Stable	On track
MorningOats	-1.1%	-1.1%	Stable	On track
RootDay	-0.4%	-0.2%	Stable	On track

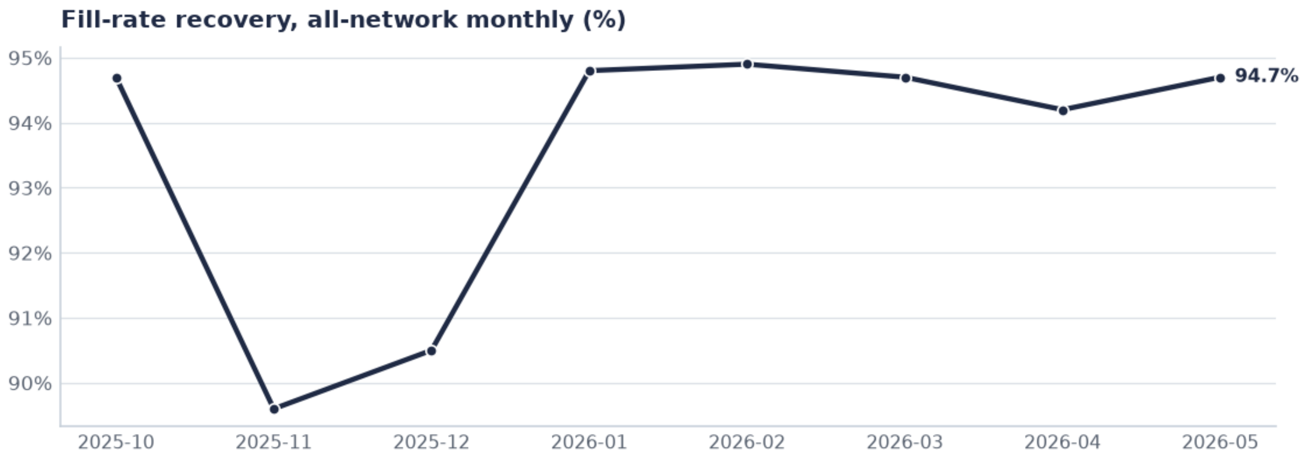
Source: plan_vs_actual, FY26 periods (Q2 = Apr–May actuals).

ProteinPeak is the consensus upside

ProteinPeak ran –25% to plan in Q1 by design — the FY26 build was loaded onto the Cinnamon Crunch and Cocoa Almond SKUs that did not ship until April 20. Apr–May actuals recovered to –6.1%. If the launch holds through the Week-8 read, the demand consensus improves further into Q3.

3 · Supply plan — fully recovered

Supply is no longer the constraint on the number. Company fill rate is back at ~95% and on-time performance has normalised after the Hurricane Tonya disruption (Nov–Dec 2025), which cut fill on the affected Gulf-coast lanes to a ~52% storm trough. The recovery path below closes out the supply side of the reconciliation; the detailed service view — DC and plant performance, cut-reason analysis — is in the Supply Chain & Service review (Report 26).

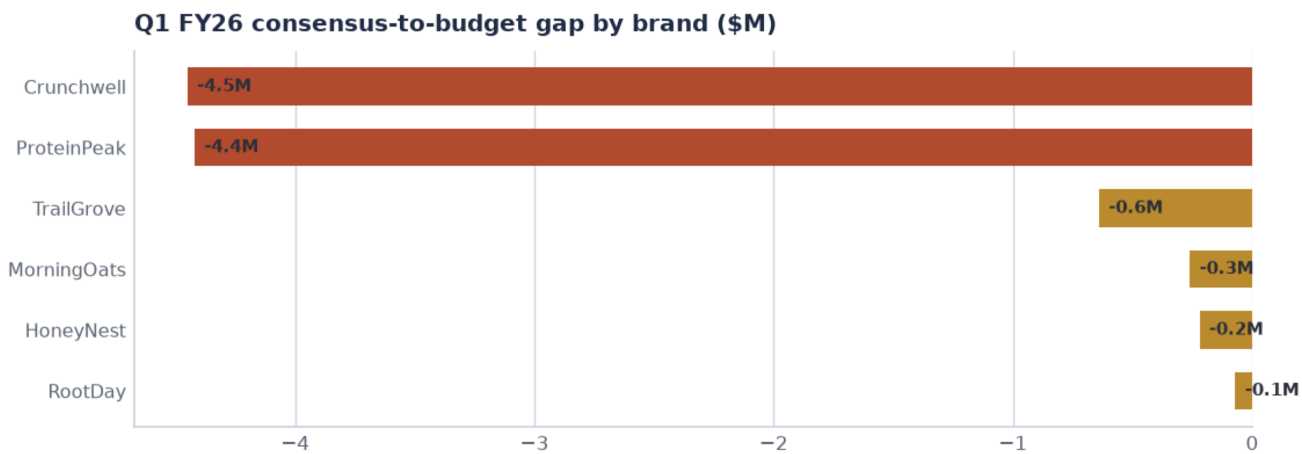


All-network fill dips in Nov–Dec 2025 (Hurricane Tonya, ~52% on affected lanes) and is fully recovered to ~95% by Q1 FY26.

Source: shipments (Fill_Rate_Pct, fraction × 100); storm trough per FACTS (51.6% Storm cut).

4 · Financial reconciliation — consensus-to-budget gap

Reconciling the consensus demand plan to the financial budget leaves the gap-to-budget below. It is not broad-based: Crunchwell and ProteinPeak together account for essentially all of the Q1 gap, and ProteinPeak's portion is closing as the launch ramps. The remaining structural exposure is Crunchwell — the flagship's plan gap is steady at roughly –6% and is the single biggest call in this cycle.



Crunchwell (–$4.5M) and ProteinPeak (–$4.4M) are the whole Q1 gap. ProteinPeak's portion is closing post-launch; Crunchwell's is structural.

5 · Consensus decisions & risks

Watch-items into Q3 (Jul–Sep, forward/plan)

(1) ProteinPeak launch durability — the demand upside depends on repeat holding at the Week-8 read. (2) Crunchwell Louisiana recovery execution against Field & Honey's 14g-protein escalation. (3) Crunchwell Pack Refresh (launch prep, Aug 15) is the biggest near-term demand bet and must land on time to support the H2 plan.

Recommendations & next steps

#	Action	Owner	When
1	Adopt the consensus demand plan: hold the FY26 number on the ProteinPeak launch recovery, contingent on the Week-8 repeat read.	S&OP; Lead / Finance	This cycle
2	Fund the Crunchwell Louisiana three-leg recovery (facings, targeted trade, LA retail media) as the priority demand action.	Marcus Boudreaux / Demand	Q2 — now
3	Confirm supply is de-risked: maintain ~95% fill and protect Crunchwell Pack Refresh launch supply for the Aug 15 date (planning target).	VP Supply Chain	Q2–Q3
4	Re-run the consensus at the July MBR with the Week-8 launch read to reaffirm or revise the hold-the-number call.	S&OP; Lead	July MBR
