

Acme Corp — H2 FY2026 Operating Plan & Reforecast

Q3–Q4 plan by brand and month, and the path to landing the year

Document type Operating plan & in-year reforecast

Period Q3–Q4 FY2026 (Jul–Dec 2026)

Owner Finance; Diane Halverson, VP Sales NA

Prepared July 2026

H1 actuals (Jan–May)	\$304.2M vs \$318.7M plan · -4.5%
Trajectory	–5.2% (Q1) improving to –3.4% (May)
H2 mandate	Land FY26 near plan on the ProteinPeak + Crunchwell ramp
Biggest H2 lever	Crunchwell Pack Refresh — launches 2026-08-15
Spend re-aim	~\$700K out of Amazon Ads into Walmart / Kroger / LA
Note	Jun–Dec figures are plan / forecast; Jan–May are actuals

Executive summary

H1 FY26 landed behind plan but on an improving line: the month-on-month variance narrowed from -5.2% in January to -3.4% in May as the ProteinPeak launch pipe filled and Louisiana began to recover. This operating plan reforecasts the balance of the year and lays out the Q3–Q4 path — by brand and by month — to land FY26 close to plan. **All figures for June through December are plan / forecast; January through May are actuals.** The H2 build is carried by four named drivers, the largest of which is the Crunchwell Pack Refresh landing on 15 August.

- **Where we are:** H1 (Jan–May) net revenue \$304.2M vs \$318.7M plan (-4.5%), with the monthly gap improving from -5.2% to -3.4% .
- **H2 drivers:** (1) ProteinPeak launch ramp continues off the April Cinnamon Crunch / Cocoa Almond in-market; (2) the Crunchwell Pack Refresh (\$28M year-one innovation, launch 2026-08-15); (3) Louisiana recovery; (4) trade and retail-media reallocation ($\sim\$700\text{K}$ out of Amazon).
- **The reforecast call:** hold the FY26 number near plan by loading the recoverable revenue into Q3–Q4, where the innovation and the improving base coincide.
- **Watch-item:** the plan assumes the Pack Refresh ships on time and the Walmart-pilot execution gap closes; both are tracked weekly. The CFO reforecast read is Report 40.

1 · Where H1 landed

H1 NET REVENUE	JAN VARIANCE	MAY VARIANCE	MONTHLY PLAN	Q1 TOTAL
\$304.2M	-5.2%	-3.4%	\$63.7M	\$181.1M
-4.5% vs plan	trough	improving	FY26 run-rate	vs \$191.2M plan

The half closed behind plan, but the shape matters more than the level. Q1 ran -5.3% (\$181.1M actual vs \$191.2M plan), then the monthly variance narrowed steadily — -5.2% in January, -5.4% in February, -5.2% in March, then -3.5% in April and -3.4% in May — as ProteinPeak's April relaunch began shipping and Louisiana share stabilised. The improving trajectory is the reason this plan holds the full-year number rather than cutting it: the two things that dragged H1 are both turning.

H2 plan closes the gap to the \$63.7M/mo plan basis as innovation and base recovery land. Jun–Dec are plan; Jan–May are actuals.

2 · The variance trajectory — why we hold the year

The variance-to-plan line is the clearest single argument for the H2 plan. Through Q1 the gap held near –5.2%, then compressed by ~1.8 points in April–May as ProteinPeak shipped and Louisiana turned. Extrapolating the recovery — not the trough — into H2 is what makes landing near plan achievable. The plan does not assume a snap-back to zero variance; it assumes the improvement already visible in the data continues as the H2 drivers layer in.

Monthly net-revenue variance to plan (%) — improving through H1

The gap compressed ~1.8 points April–May. The H2 plan continues that line, it does not assume a reset.

3 · H2 plan by brand

The H2 revenue build is not evenly spread. It is loaded onto the two brands with live innovation — ProteinPeak (launch ramp) and Crunchwell (Pack Refresh) — while the maintain-role brands hold their steady, on-track lines. The table below shows the H1 actual run-rate against the H2 plan mandate by brand. H2 figures are plan.

Brand	H1 actual run-rate	H1 var to plan	H2 driver	H2 mandate
Crunchwell	\$23.7M/mo	−5.7 to −6.0%	Pack Refresh (Aug 15) + LA recovery	Recover toward plan
ProteinPeak	\$5.44M/mo*	−6.1% (post-launch)	Launch ramp continues; mass expansion	Close the gap on the build
TrailGrove	steady	−1.6% (on track)	Hold; self-funding	Hold plan
MorningOats	steady	−1.1% (on track)	Cup / single-serve tilt	Hold plan
HoneyNest	steady	−1.1% (on track)	LTO calendar (Birthday Cake Q4)	Hold plan
RootDay	steady	−0.3% (on track)	Oat-milk category tailwind	Hold plan

4 · The four drivers that land the year

4.1 · ProteinPeak launch ramp

The April Cinnamon Crunch (PP005) and Cocoa Almond (PP006) launch is the single biggest additive driver. Trial ran 110–113% of plan at Target and 77–78% at the Walmart pilot; Target velocity (~17.5 units/store/week) is nearly double Walmart's (~9.2). Source-of-volume is healthy — 53% new-to-brand — so the ramp is real demand, not cannibalisation. H2 continues the ramp and works the Walmart-pilot execution gap.

4.2 · Crunchwell Pack Refresh — launches 2026-08-15

The Crunchwell Pack Refresh (Hero SKUs) is a \$28M year-one innovation at 0.82 confidence, launching 15 August — squarely in H2 and the largest near-term revenue bet in the plan. It is the commercial counter to

Crunchwell's relevance decline and lands into the same window as the Louisiana recovery, so H2 is where the Crunchwell line inflects toward plan.

4.3 · Louisiana recovery

Louisiana Crunchwell share fell –340 bps (6.4%→3.0%) into Q1 and has begun recovering (all-channel value share 5.80 in 26Q1 to 6.31 in 26Q2). The funded three-leg recovery — facing recovery, targeted trade, and an LA retail-media injection at ~2.2× the portfolio ROI — contributes recoverable revenue across H2.

4.4 · Trade & retail-media reallocation

The plan re-aims working dollars toward what pays back. Roughly \$700K comes out of Amazon Ads (0.40 incrementality — a drag) and into Walmart Connect (1.20), Kroger Precision (0.77) and the Louisiana recovery, at ~2.2× ROI. The reallocation does not add spend; it improves the return on the spend already committed. The full effectiveness read is the CFO reforecast, Report 40.

The reforecast, in one line

H1 landed –5.3% to –3.4% and improving. H2 loads the recoverable revenue into the window where the ProteinPeak ramp, the Crunchwell Pack Refresh (Aug 15), the Louisiana recovery and the spend reallocation all coincide. The call is to hold the FY26 number near plan rather than cut it — contingent on the Pack Refresh shipping on time and the Walmart-pilot gap closing.

5 · Risks & the H2 ask

What could stop the landing

(1) Pack Refresh slips past 15 August — the single largest H2 dependency. (2) The Walmart-pilot ProteinPeak execution gap fails to close, capping the ramp at the Target ceiling. (3) Larksfield's 14g-protein line extension (May 2026) escalates the Louisiana and protein fronts as the recovery is still fragile.

Recommendations & next steps

#	Action	Owner	When
1	Hold the FY26 number near plan; load recoverable revenue into Q3–Q4 per this reforecast.	Finance / Diane Halverson	H2 — now
2	Protect the Crunchwell Pack Refresh to its 2026-08-15 launch date — the largest H2 dependency.	Cory Whitman	By Aug 15
3	Close the ProteinPeak Walmart-pilot execution gap; hold Target momentum.	Sage Park / Maya Chen	Q3
4	Execute the ~\$700K Amazon-to-Walmart/Kroger/LA reallocation at ~2.2× ROI.	Tasha Brooks	Q3 flight
5	Bring the reconciled H2 landing view to the CFO reforecast (Report 40) at the next MBR.	Finance	Next MBR
