

Acme Corp — Q2 FY2026 eCommerce & Retail Media Performance Review

Retail-media incrementality by platform, digital shelf, and the H2 reallocation

Document type eCommerce & retail-media review
Period Q2 FY2026 (Q1 detail)
Owner Tasha Brooks, eCommerce & Retail Media
Prepared July 2026

Amazon Acme revenue (FY25)	\$44M (5.4% of net)
Retail-media spend (Q1)	\$4.2M → \$2.73M incremental
Blended incrementality	\$0.65 per \$1 spent
Best platform	Walmart Connect — 1.20 modeled incrementality
The drag	Amazon Ads — 0.40 modeled incrementality

Executive summary

The retail-media portfolio returned \$2.73M of modeled incremental revenue on \$4.2M of Q1 spend — a blended \$0.65 of incremental sales per dollar. That blended number hides a 3x spread by platform: Walmart Connect returns 1.20 and Kroger 0.77, while Amazon Ads — the largest single line at \$2.4M — returns only 0.40 because platform-reported ROAS double-counts a subscribe-and-save base that would have converted anyway. The gap between what platforms report and what is genuinely incremental is the central finding. The H2 recommendation is to reallocate ~\$700K out of Amazon Ads into Walmart, Kroger and Louisiana, where the incremental dollar works nearly 3x harder.

- **The portfolio:** \$4.2M Q1 spend → \$2.73M incremental (\$0.65 per \$1). Amazon is the largest and the least efficient line.
- **Platform spread:** Walmart Connect 1.20 (best) and Kroger 0.77 carry the portfolio; Amazon Ads 0.40 and Target Roundel 0.50 lag on modeled incrementality.
- **Reported vs modeled:** Amazon's platform-reported ROAS (~1.1x) overstates true incrementality (0.40) because it credits an already-loyal subscribe-and-save base — the single biggest measurement gap in the portfolio.
- **H2 plan (planning estimate):** reallocate ~\$700K out of Amazon Ads into Walmart Connect, Kroger and Louisiana at an estimated ~2.2x the current Amazon return; TikTok Shop grocery (macro strength 0.86) is the emerging test.

1 · Retail-media incrementality by platform

Q1 SPEND \$4.2M 4 platforms	INCREMENTAL \$2.73M \$0.65 per \$1	BEST: WALMART 1.20 reinvest	DRAG: AMAZON 0.40 reallocate
--	---	--	---

Platform	Spend	Incremental	Reported ROAS	Modeled incr.	Call
Amazon Ads	\$2.4M	\$0.98M	1.12x	0.40	Reallocate
Walmart Connect	\$1.0M	\$1.21M	2.06x	1.20	Reinvest
Target Roundel	\$0.4M	\$0.22M	1.16x	0.50	Reallocate
Kroger Precision Marketing	\$0.4M	\$0.32M	1.43x	0.77	Reallocate
Total retail media	\$4.2M	\$2.73M	—	0.65	Rebalance H2

Source: seed_retail_media_spend_q1_2026 (Pacvue + modeled incrementality), Q1 FY2026.

Amazon spends the most and returns the least incremental; Walmart returns more than it costs.

2 · The incrementality ratio — where the dollar works

Modeled incrementality ratio by platform (\$ incremental per \$ spent)

Above 1.0 (Walmart) the media pays for itself; below ~0.5 (Amazon, Target) it is subsidising base sales.

The incrementality ratio is the decision metric — dollars of genuinely incremental sales per dollar of media. Walmart Connect at 1.20 is the only platform where the media more than pays for itself; Kroger Precision at 0.77 is defensible, particularly given Acme's category captaincy there. Amazon Ads at 0.40 and Target Roundel at 0.50 are subsidising sales that would largely have happened anyway. The blended portfolio return of \$0.65 per dollar is dragged down almost entirely by the size of the Amazon line.

2.1 · The reported-vs-modeled gap

Amazon's reported ROAS is not incrementality

Amazon platform-reported ROAS runs ~1.1x, which looks acceptable — but the modeled incrementality is 0.40, because Amazon's attribution credits a subscribe-and-save base that reorders regardless of the ad. The measurement gap (reported ~1.1x vs modeled 0.40) is the single most important thing for the CFO to understand (see Report 40): the platform is reporting sales it did not cause. Where ProteinPeak runs on Amazon it does out-perform Crunchwell at the SKU level, so the fix is selective, not a full exit.

3 · Search trends & the digital shelf

ProteinPeak search-volume index across keywords (0-100)

ProteinPeak search steps up sharply at the April 2026 launch — the launch-SKU keywords went from ~1 to 100.

The digital shelf did its job at launch. Aggregate ProteinPeak search volume steps up sharply from April 2026, driven by the launch-SKU keywords: 'proteinpeak cinnamon crunch' ran near index 1 for two years and hit 100 at launch, and 'proteinpeak cocoa almond' spiked from under 1 to the 60–85 range. The parent 'proteinpeak' term and 'proteinpeak target' also lifted, confirming that the Roundel endcap and creator activity converted into genuine search demand rather than just impressions. Digital-shelf availability held through the spike, so the demand converted rather than leaking to substitutes.

4 · Emerging channels & the H2 reallocation

4.1 · TikTok Shop grocery — the emerging test

TikTok Shop for grocery carries a macro-trend strength of 0.86 (emerging, up) — the second-strongest signal in the trend frame after high-protein cereal. It is not yet a meaningful revenue line, but it is where the protein-curious, creator-led ProteinPeak audience already lives. The recommendation is a contained H2 test rather than a scaled commitment, funded from the Amazon reallocation.

4.2 · Proposed H2 reallocation (planning estimate)

Move ~\$700K out of Amazon Ads

The H2 plan is a planning estimate, contingent on a mid-H1 read: reallocate ~\$700K of Amazon Ads spend (the TrailGrove and MorningOats lines that are near-fully cannibalized are the first defund candidates) into Walmart Connect, Kroger Precision and a Louisiana retail-media layer. At current platform ratios the reallocated dollar is estimated to work ~2.2x harder than it does on Amazon. ProteinPeak's Amazon spend, which out-performs at SKU level, is protected. Full CFO framing is in Report 40; the omnichannel plan cross-references Report 28.

The reallocation is not an Amazon exit — Amazon is a \$44M Acme account and ProteinPeak's Amazon SKUs out-perform Crunchwell's. It is a surgical move out of the lines where Amazon's attribution most overstates incrementality (the defund candidates flagged in the Q1 data) and into the platforms and the region where the incremental dollar is proven to work harder.

Recommendations & next steps

#	Action	Owner	When
1	Reallocate ~\$700K H2 out of Amazon Ads (defund near-cannibalized TrailGrove/MorningOats lines) into Walmart Connect, Kroger, and Louisiana.	Tasha Brooks	H2 planning
2	Take the reported-vs-modeled incrementality gap to the CFO; standardise on modeled incrementality, not platform ROAS (Report 40).	Tasha Brooks / Finance	H2 MBR
3	Protect ProteinPeak's Amazon spend — it out-performs at SKU level — while pruning the rest.	eCommerce team	Ongoing
4	Stand up a contained TikTok Shop grocery test funded from the Amazon reallocation (cross-ref Report 28).	Tasha Brooks	H2 FY26
