

# Target — FY27 Joint Business Plan & Back-to-School 2026 Wrap

Acme Corp × Target · extending the ProteinPeak lead, the BTS occasion, Roundel efficiency

**Document type** Retailer joint business plan  
**Period** FY2027 · BTS 2026  
**Owner** Wes Okafor, Shopper Marketing; Target team (Soo-jin Lee, NAM)  
**Prepared** June 2026

|                             |                                                   |
|-----------------------------|---------------------------------------------------|
| Acme sales at Target (FY25) | \$68M · Tier 1                                    |
| ProteinPeak fit             | 18.4% Wellness Protein share (vs 5.2% at Walmart) |
| Launch performance          | Trial 113% of plan (vs 78% at Walmart-pilot)      |
| BTS 2025 benchmark          | \$14.4M incremental category \$ (Target)          |
| BTS cohort overlap          | ~65% protein-curious · ~69% Circle members        |
| Retail-media incrementality | 0.50 (Target Roundel)                             |

# Executive summary

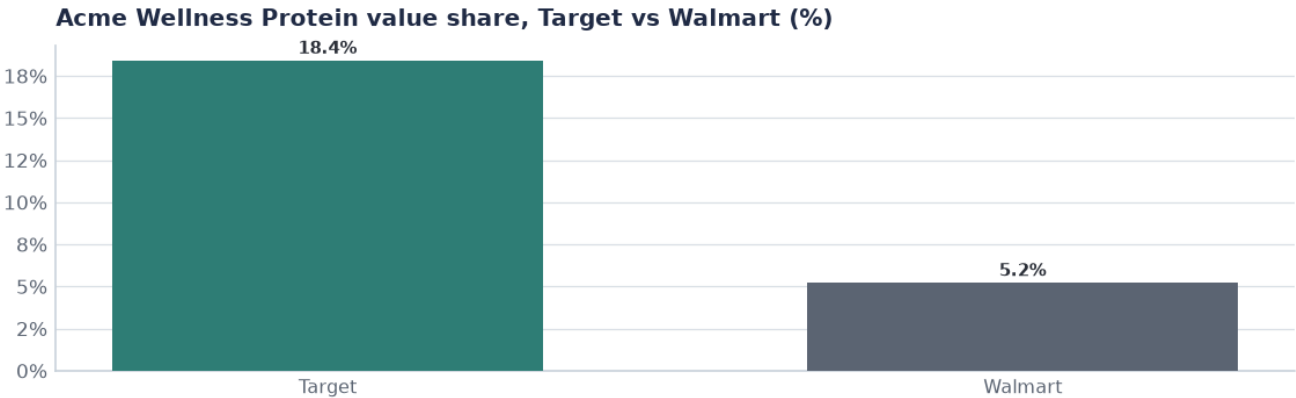

Target is Acme's #3 customer at \$68M and the account where the future of the portfolio shows up first. ProteinPeak over-indexes here — 18.4% Wellness Protein value share against 5.2% at Walmart — and the Q2 2026 launch cleared 113% of trial plan at Target versus 78% at the Walmart-pilot. The Target shopper is protein-curious, Circle-connected, and skews toward exactly the households Acme wants. The 2025 Back-to-School occasion delivered \$14.4M in incremental category dollars at Target across a seven-week window, with roughly two-thirds protein-curious cohort overlap. The FY27 plan extends the ProteinPeak lead, builds a repeatable BTS program, and pushes Roundel toward payback.

- **Extend the protein lead.** Target is Acme's protein stronghold; the FY27 plan protects and widens the 18.4% share while Walmart catches up.
- **Own Back-to-School.** BTS 2025 was worth \$14.4M in incremental category dollars at Target; FY27 builds a shopper-marketing program around the occasion.
- **Land Chocolate Almond.** The ProteinPeak Q3 Chocolate Almond concept cleared 64% top-2-box (action standard 55%) and indexes to the Target protein-curious shopper (see Report 06 / 23).
- **Fix Roundel.** Target Roundel returned \$0.50 per \$1 in Q1 — the lowest of the four retail media platforms; FY27 rebuilds it around the BTS and launch windows.

## 1 · Account scorecard — the protein stronghold

| ACME SALES (FY25)                    | PROTEIN SHARE                      | LAUNCH TRIAL                  | ROUNDEL INCR.                        |
|--------------------------------------|------------------------------------|-------------------------------|--------------------------------------|
| <b>\$68M</b><br>#3 customer · Tier 1 | <b>18.4%</b><br>vs 5.2% at Walmart | <b>113%</b><br>of plan (Wk-4) | <b>0.50</b><br>lowest of 4 platforms |

Target is where Acme's wellness-protein bet is already working. ProteinPeak holds 18.4% Wellness Protein value share at Target — more than three times its 5.2% share at Walmart — and the April 2026 launch of Cinnamon Crunch and Cocoa Almond cleared 113% of trial plan in the first four weeks, supported by a national endcap and Roundel. The Target shopper profile explains it: protein-curious, premium-leaning, and Circle-connected.

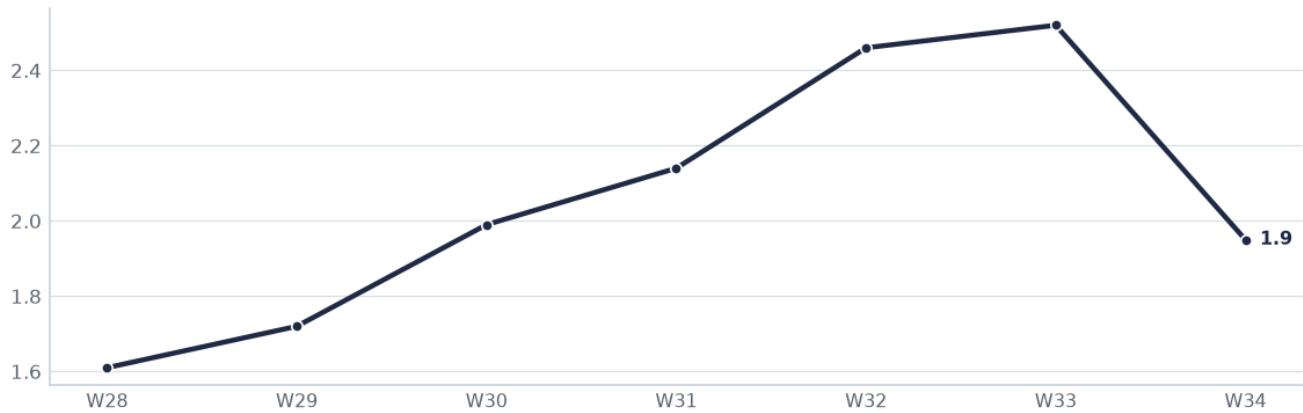

Target over-indexes for ProteinPeak by 13.2 points. Source: category\_market\_size (Q2-FY2026-MTD).

## 2 · Back-to-School 2026 wrap (2025 benchmark)

The Back-to-School occasion is a distinct, high-value cereal window at Target. The 2025 benchmark (seven weeks, W28–W34) delivered \$14.4M in incremental category dollars at Target — the largest single-retailer BTS pull in the Numerator occasion frame. The occasion concentrates exactly the households Acme wants: cereal-buying households with kids 5–14, ~65% protein-curious cohort overlap, and ~69% Target Circle membership overlap. That overlap makes BTS the natural moment to introduce protein-forward cereal to family shoppers.

Target BTS occasion — incremental category dollars by week (\$M, 2025)

The BTS window peaks in mid-August (W32–W33). Seven-week total \$14.4M. Source: `numerator_bts_occasion_2025` (Target).

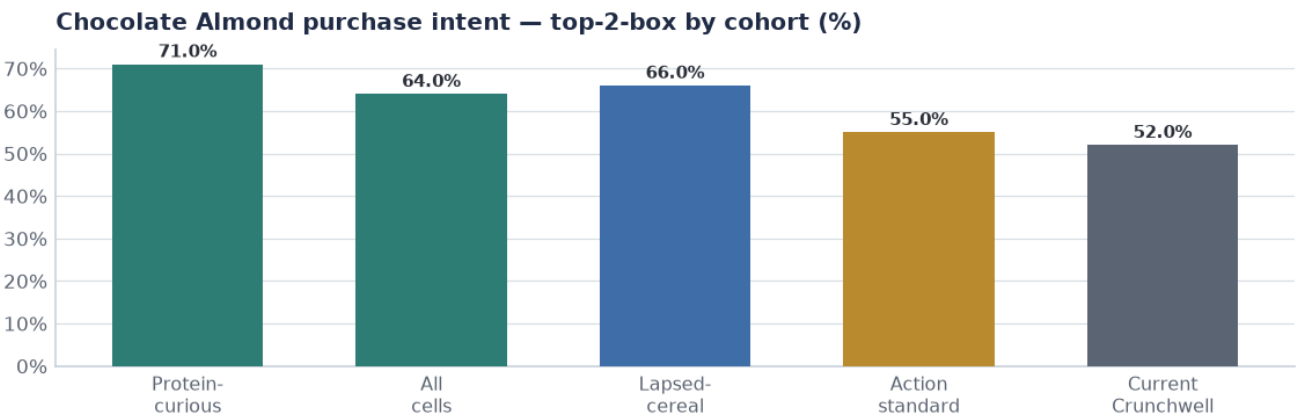

### 2.1 · Who the BTS shopper is

| BTS occasion overlap (Target, 2025) | Value      | Why it matters           |
|-------------------------------------|------------|--------------------------|
| HH with kids 5–14 buying cereal     | ~34% share | family occasion core     |
| Protein-curious cohort overlap      | ~65%       | ProteinPeak intro window |
| Target Circle membership overlap    | ~70%       | addressable via Roundel  |
| Incremental category dollars        | \$14.4M    | the size of the prize    |

### 3 · ProteinPeak Chocolate Almond — Q3 fit for the Target shopper

The ProteinPeak Chocolate Almond concept (Q3 innovation) cleared 64% top-two-box against a 55% action standard — +6 points versus the launch-SKU pretest and +11 points versus the five-year cereal-innovation benchmark. Critically for Target, it over-indexes on precisely the shopper Target concentrates: the protein-curious cohort scored 71% top-two-box, and chocolate-as-a-breakfast-flavor preference runs +14 points higher among protein-curious shoppers than the cereal average. It also passes the cannibalization gate (8pp substitutational < 12pp SteerCo threshold). Chocolate Almond is the right FY27 innovation to lead at Target.

Protein-curious 71% and all-cells 64% both clear the 55% action standard. Source: concept\_test\_chocolate\_almond (field 2026-06-22 → 2026-07-11).

### 4 · Target Roundel — the efficiency fix

Roundel is the FY27 efficiency project. It returned \$0.22M incremental on \$0.4M of Q1 spend — a 0.50 ratio, the lowest of the four retail-media platforms. The Target shopper is highly addressable (Circle overlap ~69% in the BTS window), so the gap is targeting and creative discipline, not audience quality. FY27 rebuilds Roundel around two owned moments — the ProteinPeak launch/relaunch windows and the BTS occasion — rather than always-on spend.

**Roundel is under-earning a premium audience**

A 0.50 incrementality ratio on the account with the strongest protein shopper and 69% Circle overlap is a self-inflicted inefficiency. Concentrating Roundel into the BTS and launch windows — where intent and addressability peak — is the fastest path to payback.

### 5 · FY27 joint targets & the ask

| FY27 joint workstream   | Commitment                                                     | Owner      |
|-------------------------|----------------------------------------------------------------|------------|
| Extend ProteinPeak lead | Protect/widen 18.4% protein share; lead Chocolate Almond Q3    | Sage Park  |
| Back-to-School program  | Build a repeatable BTS shopper program on the \$14.4M occasion | Wes Okafor |

| FY27 joint workstream | Commitment                                                 | Owner        |
|-----------------------|------------------------------------------------------------|--------------|
| Roundel efficiency    | Rebuild around BTS + launch windows; target payback > 0.50 | Tasha Brooks |
| Circle activation     | Use ~69% Circle overlap for protein-curious intro at BTS   | Wes Okafor   |

**FY27 risk — the protein lead is contestable**

Target is Acme's protein stronghold, but Larksfield's 14g-protein line extension (12 May 2026) and the premium-protein challengers (Magic Spoon, Three Wishes) all court the same protein-curious shopper. Leading Chocolate Almond at Target and owning the BTS occasion is how the lead is defended rather than assumed. See Reports 23 and 31.

**Recommendations & next steps**

| # | Action                                                                                             | Owner                   | When           |
|---|----------------------------------------------------------------------------------------------------|-------------------------|----------------|
| 1 | Lead the ProteinPeak Q3 Chocolate Almond launch at Target, indexed to the protein-curious shopper. | Sage Park / Soo-jin Lee | Q3 FY26 → FY27 |
| 2 | Stand up a repeatable Back-to-School shopper-marketing program on the \$14.4M Target occasion.     | Wes Okafor              | BTS 2026       |
| 3 | Rebuild Roundel around BTS and launch windows to move the 0.50 incrementality toward payback.      | Tasha Brooks            | H2 FY26        |
| 4 | Activate the ~69% Circle overlap for protein-curious introduction during BTS.                      | Wes Okafor              | BTS 2026       |
