

FINANCIAL PERFORMANCE & REFORECAST

Q2 FY2026 Financial Performance & H2 Reforecast

CFO read · plan-vs-actual trajectory, spend efficiency, the EBITDA bridge to 16%

Document type CFO financial performance read

Period Q2 FY2026 · H2 reforecast

Owner CFO office; Finance

Prepared June 2026

Q1 FY26 net revenue	\$181.1M actual vs \$191.2M plan · -5.3%
Trajectory	–5.2% (Q1) improving to –3.4% (May)
Retail-media efficiency	\$0.65 incremental per \$1 (Amazon 0.40 drag)
Trade	~\$146M FY25 · 0.52 Q1 incrementality index
EBITDA margin	14.2% today → 16% target FY28
H2 ask	Reallocate ~\$700K retail media; trade rationalization

Executive summary

Acme's revenue gap to plan is narrowing. The company ran -5.3% behind plan in Q1 FY26 (\$181.1M vs \$191.2M), improved to -3.5% in April and -3.4% in May as the ProteinPeak launch pipe filled. The miss is concentrated, not broad: Crunchwell runs a steady -6% to plan and ProteinPeak has closed from -25% pre-launch to -6% post-launch. The CFO watch-item is spend efficiency — retail media returns \$0.65 incremental per \$1 with Amazon Ads (0.40) the drag, and trade sits at a 0.52 incrementality index on roughly \$146M of FY25 spend. The path to the 16% EBITDA target (from 14.2% today) runs through mix, RGM, trade efficiency, and SG&A.; This read sets the H2 reforecast and proposes two reallocations: ~\$700K of retail media out of Amazon, and trade rationalization toward higher-incrementality mechanics.

- **Trajectory:** monthly variance improved from -5.2% (Jan) to -3.4% (May) — the launch is closing the gap on schedule.
- **Gap composition:** Crunchwell -6% (steady) and ProteinPeak (-25% → -6% post-launch) are the two brands carrying the miss; four brands are within ~1.6% of plan.
- **Efficiency:** retail media \$0.65/\$1 (Amazon 0.40 drag); trade 0.52 incrementality — both are the levers for the H2 reallocation.
- **EBITDA:** 14.2% today to a 16% FY28 target via a mix / RGM / trade-efficiency / SG&A; bridge (planning targets).

1 · Plan-vs-actual — the trajectory is improving

Q1 VARIANCE	MAY VARIANCE	MONTHLY PLAN	IMPROVEMENT
-5.3%	-3.4%	\$63.7M	+1.8 pts
\$181.1M vs \$191.2M	improving	FY26 run-rate	Jan → May

The company's monthly variance to plan improved through the first five months of FY26, from -5.2% in January to -3.4% in May, as the April 20 ProteinPeak launch began contributing revenue against a \$63.7M monthly plan. The trajectory — not the absolute Q1 miss — is the number that matters for the H2 reforecast: the gap is closing on schedule as the innovation pipe fills.

The actual line steps up in April–May as the ProteinPeak launch contributes. Source: `plan_vs_actual` (company-level, monthly).

2 · Brand contribution to the gap

Brand	Q1 var	Apr–May var	Read
ProteinPeak	-25.4%	-2.4%	Improving (launch)
Crunchwell	-6.4%	-6.2%	The steady drag
TrailGrove	-1.6%	-1.6%	On track
MorningOats	-1.1%	-1.2%	On track
HoneyNest	-1.1%	-1.2%	On track
RootDay	-0.4%	-0.3%	On track

The gap has two owners. Crunchwell runs a steady –5.7% to –6.0% every month — the structural drag, tied to the Louisiana decline and category headwinds. ProteinPeak was –25% in Q1 by design (a pre-launch pipeline draw-down) and has closed to –6% post-launch. The other four brands run within ~1.6% of plan. The reforecast therefore hinges on two questions: does ProteinPeak keep closing, and does the Louisiana recovery stem the Crunchwell drag?

3 · Spend efficiency — the CFO's core question

The working question is simple: is the marginal spend dollar working? On retail media, the blended Q1 answer is \$0.65 incremental per \$1 — carried by Walmart Connect (1.20) and Kroger Precision (0.77) and dragged by Amazon Ads (0.40). On trade, the Q1 incrementality index is 0.52 across 43 events and \$11.6M of spend, against roughly \$146M of FY25 trade — a heavy investment with a modest marginal return, concentrated in Crunchwell's ~25.6%-of-gross trade rate.

Only Walmart Connect clears break-even; Amazon Ads is the drag. Blended \$0.65/\$1. Source: retail_media_spend_q1_2026.

Spend lever (Q1 FY26)	Efficiency	Read
Retail media — blended	\$0.65 / \$1	\$2.73M incr. on \$4.2M
Walmart Connect	1.20	scale it
Kroger Precision	0.77	hold / optimize
Target Roundel	0.50	rebuild around windows
Amazon Ads	0.40	the drag — reallocate
Trade promotion	0.52 index	43 events, \$11.6M; rationalize depth

Source: retail_media_spend_q1_2026; trade_promo_events_q1_2026; trade_spend_fy25 (~\$146M total).

4 · The EBITDA bridge — 14.2% to 16%

Acme runs a 14.2% EBITDA margin today against a 16% target by FY28. The bridge is built from four planning levers: favorable mix (protein and premium growing faster than kids-sweet decline), revenue-growth management, trade efficiency (lifting the 0.52 incrementality index), and SG&A; discipline. The bridge below is a planning target, not a booked forecast — each leg is a commitment to be earned through FY27–FY28.

The 1.8-point EBITDA build to the FY28 target, apportioned across four levers (planning estimate). Source: FACTS (EBITDA 14.2% today, 16% FY28 target).

The bridge is a plan, not a forecast

The 14.2% → 16% build and its four-lever split are planning targets for FY27–FY28, not booked results. Trade efficiency alone (0.52 index on ~\$146M) is the largest single opportunity; see the RGM read, Report 17, and the H2 plan, Report 16.

5 · H2 reforecast & proposed reallocations

The H2 reforecast lands FY26 on the improving trajectory: hold the ProteinPeak build, stem the Crunchwell drag via the Louisiana recovery, and reallocate spend toward the levers that work. Two reallocations are proposed for H2 (planning estimates, pending the Week-13 launch read).

Proposed H2 reallocation	Amount / action	Rationale
Retail media — out of Amazon Ads	~\$700K	0.40 drag → Walmart Connect (1.20), Kroger, LA (2.2×)
Trade rationalization	Depth → mechanics	Lift the 0.52 incrementality index; Crunchwell depth
Louisiana recovery funding	Sustain Leg 3	LA retail media at 2.2× portfolio ROI
Hold ProteinPeak build	No cut	Launch closing –25% → –6%; the FY26 growth engine

Source: retail_media_spend_q1_2026; trade_promo_events_q1_2026; plan_vs_actual. Reallocations are planning estimates.

Reforecast risk — the gap closes on two contingencies

The improving trajectory assumes ProteinPeak keeps closing (Walmart-pilot at 78% of plan is the risk) and the Louisiana recovery stems the Crunchwell drag. If either slips, the H2 reforecast tightens. Spend efficiency must improve before further H2 budget is committed. See the H2 plan (Report 16), the RGM read (Report 17), and Report 27.

Recommendations & next steps

#	Action	Owner	When
1	Reallocate ~\$700K H2 retail media out of Amazon Ads into Walmart Connect, Kroger, and the LA recovery.	Tasha Brooks / Finance	H2 FY26
2	Rationalize Crunchwell trade depth toward higher-incrementality mechanics to lift the 0.52 index.	RGM / Finance	H2 FY26
3	Hold the ProteinPeak FY26 build; reaffirm contingent on the Week-13 launch read.	Finance / Sage Park	Week-13 read
4	Set the H2 reforecast on the improving –3.4% trajectory; gate further budget on spend efficiency.	CFO office	H2 planning
